

Side Kick

Hale's Side Kick is a compact package that allows for maximum space for tank and equipment by moving the pump module below the chassis top of frame. This allows for the space above the module to utilize the full width of the apparatus effectively assisting to lower the center of gravity. The Side Kick is ideally suited for pumper tankers, compact pumpers, midi pumpers, rescue pumpers, rural supply apparatus, and initial attack apparatus.

Features

- Designed to fit in most L1 compartments
- All stainless plumbing manifolds for corrosion resistance
- Stainless Steel panels
- NFPA 1901 rating from 500 GPM to 1250 GPM
- Available foam options
- Comes standard with Lift style control handles and drains
- Design allows for entire module to be dropped out for quick repairs

Applications/Solutions

- Fire OEMs
- Firefighting - Wildland Forestry
